THE LABOR FORCE IN IDAHO
and
BASIC ECONOMIC DATA FOR IDAHO

DEPARTMENT OF EMPLOYMENT
STATE OF IDAHO
SCOTT B. MCDONALD, DIRECTOR

Prepared by the
RESEARCH AND ANALYSIS BUREAU
James D. Day, Chief

FOREWORD

This publication contains data on Idaho's workforce that previously had been found in two separate publications — "The Labor Force In Idaho" and "Basic Economic Data for Idaho." The information presented includes labor force data for 1980 and 1981 and basic economic data for 1981. The data is given for the state, counties, and labor market areas. Historical data for these series can be obtained from the Bureau compiled in response to the many requests for labor force and industrial employment information.

DEFINITIONS

Employment comprises wage and salary workers (including domestics and other private household workers), self-employed persons, and unpaid family workers who worked 15 hours or more during the survey week in family-operated enterprises. Employment in both agricultural and nonagricultural industries is included. Also included are persons temporarily absent from work because of illness, bad weather, vacation, labor-management dispute, or because they were taking time off for various other reasons, even if they were not paid by their employers for the time off. Employed persons holding more than one job are counted only once. Commuters are shown at their place of residence and not at their place of work.

Unemployment comprises all persons who did not work during the survey week, who made specific efforts to find a job, and who were available for work during the survey week. Also included as unemployed are those who were waiting to be called back to a job from which they had been laid off.

The Civilian Labor Force comprises the total of all civilians classified as employed or unemployed in accordance with the criteria described above.

The Unemployment Rate represents the number unemployed as a percent of the civilian labor force.

Seasonal Adjustment refers to the correction of an economic time series for regularly recurring seasonal movement which can be estimated on the basis of past experience. By eliminating that part of the change which can be ascribed to usual seasonal variation it is possible to observe the cyclical and other nonseasonal movements in the series. However, in evaluating deviations from the seasonal pattern — that is, changes in a seasonally adjusted series — it is important to note that seasonal adjustment is merely an approximation based on past experience. Seasonally adjusted estimates have a broader margin of possible error that the original data on which they are based, since they are subject not only to sampling and other errors but, in addition, are affected by the uncertainties of the seasonal adjustment process itself. In the following pages data that has been seasonally adjusted is labeled "adjusted"; raw data is labeled "unadjusted".

The Nonagricultural Wage and Salary Employment represents persons on nonagricultural establishment payrolls (including employees on paid sick leave, paid holiday, or paid vacation) who work or receive pay for any part of the pay period including the 12th of the month. It is a count of jobs by place of work. It does not include proprietors, self-employed, unpaid volunteer or family workers, domestic workers in households, military personnel and persons who are laid off, on leave without pay, or on strike for the entire reference period.

We hope the publication of this information will assist private and governmental researchers in their tasks. A large proportion of the data was gathered as a result of the day-to-day activities of the Idaho Department of Employment.
